PORTFOLIO AND CASE STUDIES

Syeda Marjan

AI Automation Developer and Operations Lead

I build my own software with Claude AI, run it for real clients, and these are the results.

01	**RTA (Corda Flow)**	Job application platform	**SEO client hired in 1 month**
02	**Robiq client login**	Live results for each client	**500 applications, 19 interviews**
03	**Corda Scout**	AI job finder and link checks	**47% bad listings stopped**
04	**Client Outreach**	Cold email software for companies	**Finds, writes, sends from client email**

HOW I WORK

Build it with Claude. Run it for real clients. Show the result.

I am not a traditional developer. I write my software by describing what it must do to Claude AI, testing every screen myself, and shipping it to the people who need it. Then I use it on real client work, so every tool here has a number behind it.

7
tools built and shipped by me, with no dev team
Claude AI and web code

2,219
real jobs run through my platform
RTA (Corda Flow)

1 month
for an SEO client to be hired using it
Robiq client

Software I built	Who used it	Real result
RTA (Corda Flow) sourcing, applying, review, interview CRM, AI tailoring	Corda Digital team, then every Robiq client	**2,219** jobs tracked, **771** tailored resumes and cover letters, SEO lead hired at Somewhere in a month
Robiq client login each client sees every application	Robiq clients	Affiliate client: **500** applications, **19** interviews, all visible to the client
Corda Scout and link checks AI job finder	Corda Digital team	**47%** of job listings were dead, duplicate or wrong country and were stopped before anyone applied
Client Outreach cold email outreach software	Companies running cold email, and Robiq	Finds each lead's email, writes a personal draft for that lead, and sends it from the client's own email account
Job Finder, **Job Aggregator**	Robiq clients	Turns LinkedIn posts into direct careers page links clients can apply to
Clipper	A client	Turns one long video into short captioned clips
Support Desk	Demo product	AI flags risky tickets so urgent ones come first

Before I built any of this, I ran the same work by hand at CNT Consulting (case study 01). That is where the 10,132 applications, 88 interview requests and 3 hires came from, and why I started building my own tools.

CASE STUDY 01

CNT Consulting

RECRUITMENT AGENCY

10,132 applications and 88 interview requests, with 3 clients hired in under a month

CNT Consulting applies to jobs on behalf of its clients, mostly US software engineers. I joined in business development, sourcing jobs and applying, and was promoted to Project Manager, running the team's daily work: reviewing applications, training new members, and handling recruiter email, follow-ups and interview scheduling for every client. From 2024 to 2026 I also worked directly for a US client as his virtual assistant, running his job search, inbox and interview calendar.

10,132	88	3
applications logged by the team	interview requests	clients hired in under a month

The challenge

Several clients were job hunting at once, and every one of them produced work every day: jobs to find, resumes to tailor, applications to send, and recruiter emails to answer. A missed reply or a double-booked interview could cost a client the job, and the team was new and remote.

Key constraints

- One shared inbox and calendar flow across several clients
- New team members who needed training before their work could go out
- Every application had to be traceable back to a job, a resume and a person

My approach

Team and quality

- Reviewed the team's applications before they went out and fed mistakes back daily
- Trained new members on sourcing, tailoring and logging
- Kept every application in Notion, linked to its job and resume

Email, follow-ups and scheduling

- Handled recruiter emails and replies for every client
- Ran follow-ups so no recruiter was left waiting
- Booked and rescheduled interviews across time zones

Date	Company
Jun 15 4:30 PM → 4:50 PM	Koalafi
Jun 15 3:30 PM → 4:00 PM	MetroStar
Jun 15 2:30 PM → 3:00 PM	Revolutional
Jun 15 1:30 PM → 2:30 PM	Cognizant
Jun 15 1:15 PM → 1:45 PM	Boulevard
Jun 12 4:00 PM → 4:15 PM	T-Rex Solutions
Jun 12 3:00 PM → 3:30 PM	JTEC Consulting
Jun 12 2:30 PM → 3:00 PM	GuidePoint Security
Jun 12 2:00 PM → 2:30 PM	Prodege
Jun 12 1:00 PM → 1:25 PM	GDIT
Jun 12 12:30 PM → 1:00 PM	PlanetScale
Jun 11 5:30 PM → 6:00 PM	Experian
Jun 11 4:00 PM → 5:00 PM	CareFirst

Figure 1. The real interview log I kept in Notion: 17 interviews booked between 11 and 15 June.

Date	Company	Profile
Aug 6 4:00 PM → 4:30 PM	McKesson	
Aug 6 3:30 PM → 4:30 PM	Communications Data Group	
Aug 5 2:30 PM → 3:00 PM	Lyntris	
Aug 4 1:00 PM → 2:00 PM	Arcadis	
Jul 30 5:00 PM → 5:30 PM	Advanced Solutions Internatio	
Jul 30 3:00 PM → 4:00 PM	Everforth ECS	
Jul 29 3:30 PM → 4:30 PM	NTT Data Service	
Jul 29 2:00 PM → 2:30 PM	CyberMaxx	
Jul 29 2:00 PM → 2:30 PM	Clearwaters.IT	
Jul 28 2:30 PM → 2:45 PM	Vaultes LLC	
Jul 27 3:00 PM → 3:30 PM	By Light	
Jul 27 2:30 PM → 3:00 PM	EssilorLuxottica	
Jul 24 2:00 PM → 2:30 PM	Twilio	
Jul 24 11:00 AM → 12:00 PM	Holman	

Figure 2. The same log, 24 July to 6 August, client names blurred. McKesson, CyberMaxx and Twilio became hires.

Results

Metric	Result
Applications logged and tracked by the team	**10,132**
Jobs sourced	**3,103**
Interview requests	**88**
My own applications	**1,081**, earning **13** interview requests
Clients hired	**3 in under a month**, at McKesson, CyberMaxx and Twilio

What I took from it

- Volume only turns into interviews when every reply is answered fast. The inbox mattered as much as the applying.
- A daily review loop taught new members faster than any written guide.
- Tracking in Notion worked, but it was slow and easy to get wrong. That is why I built my own platform next.

CASE STUDY 02

Corda Digital

REVERSE RECRUITING AGENCY

I built a team platform with Claude AI, and it stopped 47% of bad job listings before anyone applied

As Operations Lead at Corda Digital, I built and ran Corda Flow, the web app the whole team worked in. It covers four roles, sourcing, applying, manager review and an interview CRM, and uses AI to tailor each resume and cover letter to the job.

47%	2,219	771
bad listings filtered out automatically	jobs tracked in the platform	tailored documents produced

The challenge

The team was spending hours on jobs that were already closed, duplicated, or not open to the client's country. Sourcing, applying, review and interviews lived in different places, so nobody could see where a job stood, and interview dates were easy to lose.

My approach

Built the platform

- One web app for sourcing, applying, review and interviews, with a login for each role
- AI resume and cover letter tailoring per job, with checks on every output
- Automatic checks on every job link: dead, duplicate or wrong-country jobs are stopped
- Corda Scout: an AI job finder that searches LinkedIn, Indeed, SimplyHired and careers pages and sends only valid jobs into the platform

Ran the operation

- Hired, trained and supervised the remote team
- Wrote SOPs, joining forms, work agreements and a weekly pay model
- Interview CRM with statuses, rescheduling and Google Calendar sync
- Daily reports, weekly client updates and monthly mistakes reports

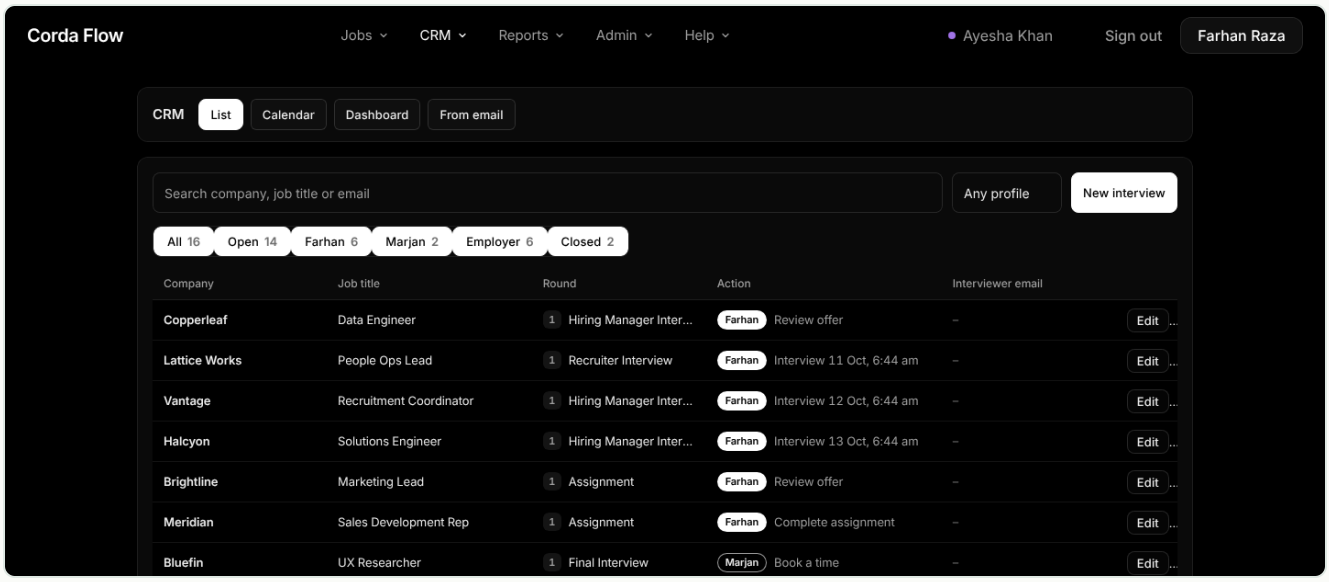

Figure 3. Interview CRM with statuses and next actions per client (example data from the demo account).

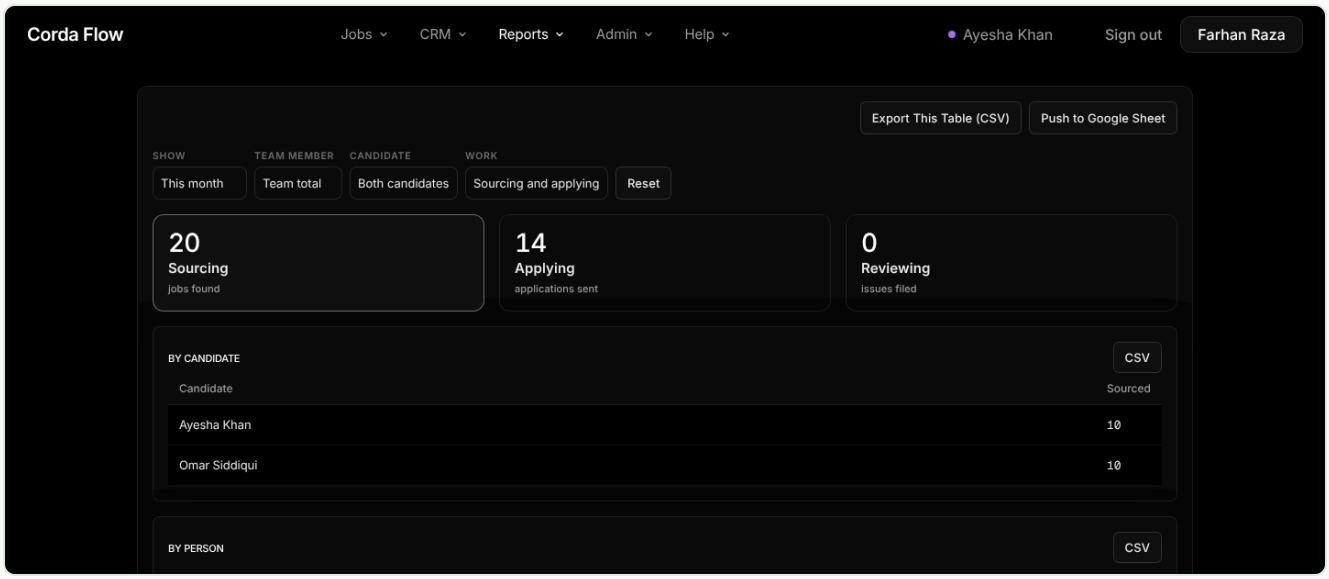

Figure 4. Team and client report with CSV and Google Sheet export (example data from the demo account).

What I took from it

- Stopping a bad job before anyone touches it saves more time than making people faster at it.
- When the tool records who did what, review and pay stop being arguments.
- I can build the software a team needs myself, with Claude AI, instead of waiting for a developer.

CASE STUDY 03

Robiq

MY OWN BUSINESS

My own software, run for real clients: an SEO lead hired by Somewhere within a month

Robiq is my reverse recruiting business. I run remote job searches for clients in the USA, UK and UAE: finding jobs, tailoring every application, and handling the recruiter emails, follow-ups and interview scheduling until the client is hired. I use the platform from case study 02 for every client.

1 month
for an SEO lead client to be hired, at Somewhere

26
SEO pages built on getrobiq.com, schema on all

19
interviews from 500 applications for an affiliate client

What I did

Client job searches

- Applied to SEO roles for a senior SEO lead, who was hired by Somewhere within a month
- Running an affiliate manager's search: 500 applications and 19 interviews so far
- Weekly status updates and a client login to see every application
- Blocked companies where a client was already hired, so no one applies twice

Website and marketing

- Built getrobiq.com: 26 keyword-targeted pages with schema markup
- Wrote a results page with real outcomes and no client names
- Daily client outreach from a lead tracker, with lead finding automated

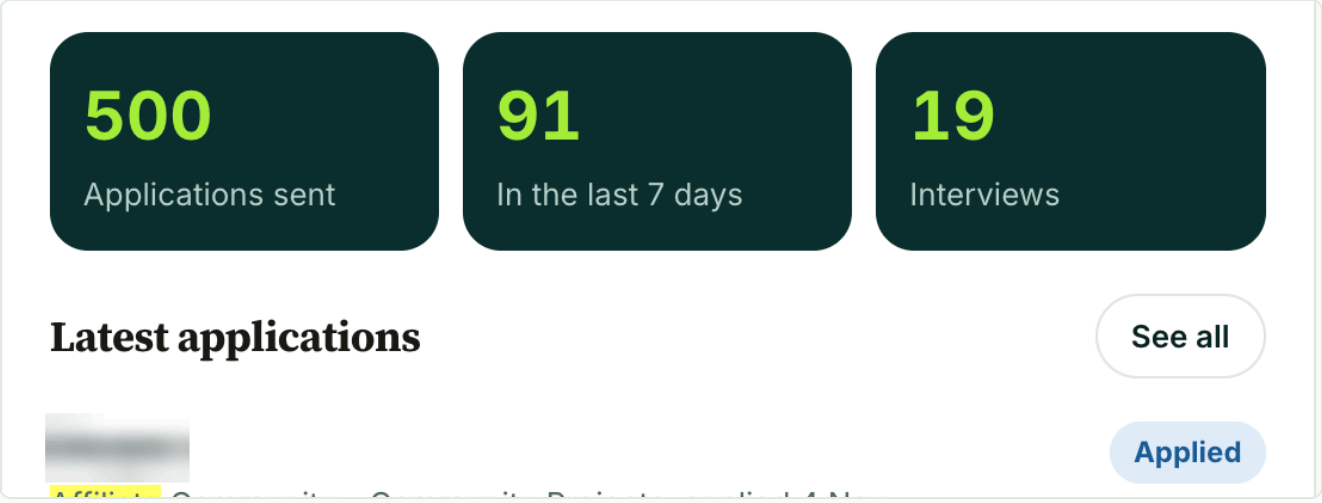

Figure 5. A real client's Robiq login: 500 applications sent, 19 interviews. Company names blurred.

Software I built with Claude AI

Project	What it does	Link
RTA (Corda Flow)	The job application platform my team uses every day: sourcing, applying, manager review and an interview CRM. AI agents inside it pull the job details from a posting, check the title, and tailor each resume and cover letter.	getrobiq.com/corda-flow Demo on request
Corda Scout	AI job sourcing across nine ATS platforms. It checks each job against RTA's rules and sends in only valid ones.	Demo on request
Client Outreach	Cold email outreach software for companies. It finds the right person's email, writes a draft email to match that lead, and sends it from the client's own email account, with daily limits and inbox warm-up.	Demo on request
Support Desk	A ticket board where AI reads every ticket and flags the risk, so urgent ones are handled first.	support-desk
Job Finder	Finds a LinkedIn job on the company's own careers board, so a client can apply directly.	Demo on request
Job Aggregator	Pulls four job sources into one clean feed.	Source-link
Clipper	Cuts one long video into short vertical clips with captions. AI reads the transcript and picks the best moments. Built for a client.	clipper

GitHub: github.com/syedamarjanfarhan0-droid

What I took from it

- One placement, shown honestly, sells better than any claim.
- Clients stay calm when they can see every application themselves.
- Most of my tools started as a slow manual task I did not want to do twice.
